AutoLISP One of AutoCAD's built-in APIs is AutoLISP, a programming language that can be used for customization and automation. In addition to a set of basic drawing functions, AutoLISP provides several important drawing functions which are part of a basic drawing application, such as the capabilities to draw lines, arcs, polygons, text, and a limited number of spline curves. AutoLISP also supports a variety of mathematical functions and operators. AutoLISP may be used to extend AutoCAD's drawing functions or to add new drawing functions. Drawing functions written in AutoLISP may be published by creating libraries that AutoLISP can use in drawing functions. AutoLISP is a dynamic programming language, which allows for highly-efficient processing. The AutoLISP language is compiled into assembly language and the resulting assembly language file is loaded into a memory area separate from the AutoCAD program. AutoLISP uses basic programming constructs and AutoCAD's internal functions to generate native code, but its scope is limited to AutoCAD's internal functions. AutoLISP programming is done in the text editor named AutoLISP (from Autodesk, not to be confused with the Text Editor named TextMate or ListLisp). AutoLISP can be used to edit drawings. AutoLISP can also be used in applications which require drawing and calculation functions, for example, by adding to a drawing function the control functions required by an application.
