You can import images from nearly any file format, including JPEG, PNG, BMP, TIFF, GIF, EPS, PSD, and PSB. You can also export your files in a variety of formats. HelpXplain supports exporting to PowerPoint. You can also export projects to EML, HTML, and text files. You can also save projects in PDF format. Overall, this is an application that can simplify your work while you create your PowerPoint project. After you have downloaded and installed this software, you can create PowerPoint projects on your computer. First, you need to create a PowerPoint project. You can either use the Wizard to do so, or open the Project Manager window. You need to name the project first. You can do that by clicking the Name field and entering a new project name. The New Project window opens. You can choose to use one of the predefined templates or to begin with a blank project. If you opt to begin with a blank project, the Project Manager window opens. You can use the Project Manager window to manage your projects. You can add or remove projects from your library. You can also set the type of projects you wish to import. For example, you can set the project type to PowerPoint, PowerPoint Archive, XML, PPTX, or PPT. Then, you can navigate to a folder on your computer where you have stored your PowerPoint projects. From the right pane, you can navigate to the folder, and then select the folder where you wish to import your project. On the left side of the window, you can navigate to the Import/Export tab and set the type of files you wish to import. You can import text files, spreadsheets, or pictures. You can select a file type from the drop-down menu. If you select a file type from the menu, the Import window opens. You can then select the type of file you wish to import. If you have a Microsoft Excel workbook, you can import Excel files. You can also select
