Advanced Query Builder

Advanced Query Builder (AAQB) is a graphical query builder for Delphi and C++ Builder. From it, you can build complex queries using various wizards and dialogues to create queries on your SQL Server and remove data. There are more than 80 samples of queries from different queries, tables, views and data types. AAQB includes all the ADO components for building queries for different data sources from standard SQL, MS SQL, MyQL, PostgreSQL, InterBase/Firebird, MSSQL, JDBC, Stored procedure, ADO, Native C++ ABL and standard VCL. With the help of visual query builder, you can create a complex query with unions and subqueries, applying multiple filter. The application has a database engine with more than 200 samples of queries and data types for various DBMS. Advanced Query Builder Showcase: Advanced Query Builder components are fully tested and approved by the US Government. All the code is free of viruses, Trojan horses, spyware and adware. The components are designed and prepared for reliable and secure operation in the client computer. The application is tested for reliability, robustness, and security even in the worst conditions.
